

**The Gold Standard**  
**1<sup>st</sup> Line Supervisor/Manager**  
**(Chemicals & Polymers)**

**Report by John Holton, Cogent  
Strategy Director**

Project Sponsored by the Welsh Assembly  
Government

April 2009

## **The Gold Standard – 1<sup>st</sup> Line Supervisor/Manager (Chemicals & Polymers)**

**Report by John Holton, Cogent Strategy Director**

### **Executive Summary**

The Gold Standard is an aspirational standard for key job roles that defines the skills and competences required to perform the job to world class standards. Developed with employers the Gold Standard provides a workforce up-skilling programme. The Gold Standard not only defines the background technical knowledge and competences to do the job safely and well but also addresses the challenges of improving productivity and new product & process development. The development of functional & behavioural skills provides the employee with a set of valuable, transferable cross sector skills.

This project developed the Gold Standard for a 1<sup>st</sup> Line Supervisor in Chemicals and Polymers. The competencies required to become a world class supervisor have been defined by employers for technical competence, business improvement, compliance and functional & behavioural skills. For a 1<sup>st</sup> line supervisor the skill developments mainly focus on managerial aspects of the role including process, people and self management but also include health, safety and environmental responsibilities.

Based on the defined competencies qualifications and training programmes have been identified for up-skilling the workforce. Where suitable courses exist these have been incorporated into the Gold Standard however employers are seeking more flexible training and favour smaller 'bite sized' modular training programmes and a number of new qualifications have been designed.

The Gold Standard has been matched to provision in Wales. Business improvement, compliance and management & leadership training is widely available from both public and private providers. Technical training is less widely available for up-skilling, for example, an apprentice; this is the range covered by Foundation Degrees. There are no chemical or polymer Foundation Degrees available in Wales and Cogent is currently developing a national FD framework for science and engineering and the University of Glamorgan with Pembroke College is working on a Petrochemicals FD.

Technical up-skilling was a contentious area of the Gold Standard for employers who were seeking good management skills and were less focused on strong academic knowledge; thus lack of availability of provision probably reflects employer demand. The challenge is therefore to stimulate demand and provision at the same time; this is a role of the newly formed National Skills Academy for Process Industries. The role of NSAPI which includes the quality assurance of training provision needs to be more clearly defined in Wales.

In rolling-out the Gold Standards the next stage is to identify funding opportunities in Wales for the qualifications through the HRD consultants; management & leadership and business improvement are potentially fundable qualifications.

The new Gold Standards are available in Welsh and English to all stakeholders as product sheets (see appendix 9) or on-line ([www.cogent-ssc.com/Gold\\_Standard/index\\_3.php](http://www.cogent-ssc.com/Gold_Standard/index_3.php)) and have been incorporated into the Cogent career pathways ([www.cogent-careers.com](http://www.cogent-careers.com)).

## **Background**

The Cogent sector is characterised by science based, chemistry using, process technology driven industries. Technology continues to advance in sophistication and new product development sits at the heart of many companies' strategy. As a result the workforce continually needs to become more skilled and entrepreneurial.

The UK process industries: chemicals, pharmaceuticals and polymers compete in a global market but lack the benefits of low cost labour, utilities and raw materials that are enjoyed by many competing countries. To remain competitive the UK process industries must demonstrate real added value yet data shows that the UK lags in productivity compared to the US and a number EU countries and a strength in innovation is often not exploited. To remain competitive the UK needs a well trained, highly skilled workforce that continues to develop as technology advances.

Demographic research has demonstrated that 70% of the 2020 workforce is already in employment highlighting the imperative for a robust industry up-skill programme; to provide a sound basis for such a programme Cogent has initiated the development of the Gold Standard as one of the benchmarks for global competitiveness.

In March 2007 Cogent completed a skills study for the Welsh Assembly Government entitled "A Survey of Process Industries in South Wales". The recommendations were:

***Recommendation 1***

*In line with Cogent's Sector Skills Agreement, develop the Gold Standard job roles for first-line supervisors in the process industries.*

***Recommendation 2***

*Understand the up-skilling requirements for employers in Wales against the Gold Standard.*

***Recommendation 3***

*Review current training for first-line supervision, health and safety, lean manufacturing/productivity enhancement et cetera.*

***Recommendation 4***

*Identify appropriate sector specific solutions to up-skill the workforce in Wales and develop training where gaps exist.*

These recommendations were driven by the identified skills needs and gaps identified in the report i.e.

## **Skills Needs and Gap Drivers** (from "A Survey of Process Industries in South Wales")

*Employers were asked a series of questions related to the skills of their current workforce, and to indicate the most important skills issues to be tackled over the short term. Of the 800 process operators and technicians in the sample, there was a 100% response indicating the need for up-skilling by one level, regardless of current level.*

*This need was not reflected in craft occupations, where the majority was felt to be operating at the required level.*

*When asked to categorise the area in which the workforce would most need to improve their skills over the next one to 5 years, Management and Leadership and People Management scored highest, closely followed by improvement in Basic Technical Skills.*

When this was probed further a need for supervisor training particularly the First Line Supervisor was identified. This is often the first job role where an individual is

responsible for a small team and management skills emerge as an important job requirement.

### **The Gold Standard**

The Gold Standard is an aspirational standard that underpins an industry up-skilling programme. For the key job roles in each industry sector employers, with support of Cogent, define the skills and competences required to perform the role to world class standards. These Gold Standard job roles underpin the identification of local training requirements to raise the standards bar for industry skills. For more information on the Gold Standard see the web-site:

[www.cogent-ssc.com/Gold\\_Standard/index\\_3.php](http://www.cogent-ssc.com/Gold_Standard/index_3.php)

This project is to develop the Gold Standards for a First Line Supervisor at Level 4 in Chemicals and Polymers.

The aspirational Gold Standard will include training and qualifications for a world-class supervisor covering

- Technical Competence
- Business Improvement
- Compliance
- Functional & Behavioural Skills

Thus the Gold Standard not only defines the background knowledge and competences to do the job safely and well but also addresses the challenges of improving productivity, new product and process development. The development of functional & behavioural skills provides the employee with a set of valuable, transferable cross sector skills.

The Gold Standard can then be used to ensure that local provision is available and focussed on the clearly defined demand-led requirements. This is particularly valuable for SMEs by 1) giving clarity on training requirements, 2) ensuring local provision and 3) targeting funding.

Providers can then deliver courses that employers value in a cost effective manner and funding can be directed to demand led training.

### **Project Structure**

The objective was to define the aspirational, world-class standards for the Gold Standard - First Line Supervisor at level 4 in Chemicals and Polymers.

Employers in Wales from the Chemical and Polymer industries were consulted on the competencies required for the First Line Supervisor job role using the four categories defined above.

The competencies were then matched to the National Occupational Standards – currently being re-written by Cogent and credit and levelled for submission onto the Qualification Credit Framework - and qualifications identified to develop and accredit the required skills.

The Gold Standards including the new qualifications were tested with employers, awarding bodies and providers before final sign-off. The ability of providers in Wales to deliver the Gold Standard qualifications was also tested and gaps highlighted.

The final phase was the promotion Gold Standard in Wales and, outside of this project, how the Gold Standard training will be delivered (i.e. role of the National Skills Academy for Process Industries) and funded in Wales.

### **Project Team**

The project team consisted;

|                   |                               |
|-------------------|-------------------------------|
| Steve Westhead    | Solutia & Chair               |
| John Holton       | Project Manager               |
| Melanie Welch     | Project Administrator         |
| Kieran Quill      | Cogent Consultant (Chemicals) |
| Tony Pringle      | Cogent Consultant (Polymers)  |
| Mike Lynham       | Consultant                    |
| Rebecca Chapman   | Penn                          |
| Joanne McCafferty | Penn                          |
| Lynn Evans        | Dow                           |
| Tony Beck         | Warwick                       |

Plus support from: James Murdock, Cogent Education & Qualifications

### **Development of the Draft Gold Standard Competencies**

Using Cogent's internal expertise of the industry sector and knowledge of the Gold Standard format a Cogent team produced a 'strawman' Gold Standard for a 1<sup>st</sup> Line Supervisor (Appendix 1).

At the first project meeting in September 2008 this was extensively reviewed with the employers on the project team and this led to some significant changes in content and concept, viz

The Technical Competence category seeks to cover two pathways; graduate new entry and internal promotion (i.e. apprentice up-skilling).

A graduate has the technical knowledge but lacks the work experience hence a set of process operations competencies are included. Whilst it was agreed that a new graduate must acquire operational know-how it was not accepted that he/she must know how to hands-on operate the plant. The competencies were changed to recognise a need to know how the plant works.

An apprentice knows how the plant operates from hands-on experience and hence 'ticks the box' for process operations, however they may not have the technical know to the required depth. This could be obtained from a science based Foundation Degree.

It was suggested adding 'safety critical procedures' to the process operations module.

The process maintenance competencies were more aligned to a maintenance manager and did not reflect the job requirements for a process supervisor. This was changed to reflect the need to 1) respond to maintenance, 2) plan for maintenance and 3) allocate personnel.

The Business Improvement category was modified to include 6-Sigma training; Green belt status at this job level.

The Compliance competencies are about understanding and managing safety; the lower level job roles contain the knowledge requirements to work on a chemical or polymer plant i.e. Nebosh L2 Certificate in Workplace Health and Safety, Nebosh L2 Award in Process Safety and Nebosh L2 Award in Environmental Control. It was decided to test with employers current training for supervisors and at the same time talk to providers on the options.

In the Functional & Behavioural section it was agreed that "managing diversity and discrimination" should be added and 'performance management'.

The Gold Standard could provide a route to Charter status; this is being pursued with the institutions for the Engineering Technician status with the level 3 Gold Standard and when the level 4 GS is complete a similar process will be undertaken.

The draft Gold Standard was agreed (Appendix 2) and used in the consultation process. At this point chemicals and polymers were kept together in the one Gold Standard because there are significant overlaps and it was felt that only in Technical Competence and possibly Compliance would differences emerge.

### Employer Consultation

The initial consultation plan comprised 20 face to face interviews and an email questionnaire; this was later expanded to include more face to face interviews and a postal consultation, thus the final employer consultation was;

|                         |     |
|-------------------------|-----|
| Face to Face interviews | 43  |
| Email Questionnaire     | 126 |
| Postal Questionnaire    | 145 |

Two companies, Solutia and Brecon, suggested a meeting with their Supervisors to get first hand feedback; this proved a very useful exercise. Similarly two companies Solutia and Penn arranged workshop sessions with a small group of local employers which again were extremely useful.

The Cogent database contained over 250 sector employers in Wales but an analysis revealed that many were micro companies (<10 employees) and many were small (<50 employees). It was decided to include the small companies but exclude micro companies who were unlikely to have a 1<sup>st</sup> line supervisor position. The initial email questionnaire generated a poor response so the face to face interviews were increased and a postal questionnaire sent out (with prepaid return envelope), this generated an improved feedback.

Face to face interviews were held with the companies listed in Table 1.

**Table 1 Employer Consultation**

|   | Employer  | Sector   |
|---|---|----------|
| 1 | Dragon Polystyrene                                  | Polymers |
| 2 | Synergy Plastics, Newport                           | Polymers |
| 3 | Principality Plastics, Newport                      | Polymers |
| 4 | Mollertech, Newport                                 | Polymers |
| 5 | Klockner Pentaplast, Newport                        | Polymers |
| 6 | Gwalia Packaging, Pontypridd                        | Polymers |
| 7 | Riverside & Dragon Plastics (Merged to form Gwalia) | Polymers |
| 8 | Kautex Textron, Hengoed                             | Polymers |

|    |                                     |           |
|----|-------------------------------------|-----------|
| 9  | JM Plastics, Caerphilly             | Polymers  |
| 10 | Linear Plastics                     | Polymers  |
| 11 | Clariant                            | Polymers  |
| 12 | Atlas Polymers                      | Polymers  |
| 13 | Colour Tone Masterbatch             | Polymers  |
| 14 | MVTP Packaging                      | Polymers  |
| 15 | Dow Corning, Barry                  | Chemicals |
| 16 | Ineos, Barry                        | Chemicals |
| 17 | Hexion, Barry                       | Chemicals |
| 18 | Vopak, Barry                        | Chemicals |
| 19 | Centrica, Barry                     | Chemicals |
| 20 | Penn Pharma, Cardiff                | Chemicals |
| 21 | Warwick, Flint                      | Chemicals |
| 22 | Synthe, Mold                        | Chemicals |
| 23 | Solutia, Newport                    | Chemicals |
| 24 | Roperhurst, Barry                   | Chemicals |
| 25 | Tubex, Aberdare                     | Polymers  |
| 26 | Flexsys Ruabon                      | Chemicals |
| 27 | Knauf Insulation, Pontypool         | Chemicals |
| 28 | Everwhite plastics, Aberdare        | Plastics  |
| 29 | Sekesui, Merthyr Tydfil             | Chemicals |
| 30 | British Salt, Northwich             | Chemicals |
| 31 | GSK, Ulverston                      | Chemicals |
| 32 | Teva, Runcorn                       | Chemicals |
| 33 | Chevron, Pembroke                   | Chemicals |
| 34 | K Premium Film, Newport             | Polymers  |
| 35 | Brecon, Hay on Wye                  | Chemicals |
| 36 | Biotec Services International       | Chemicals |
| 37 | Norgine Ltd                         | Chemicals |
| 38 | Advanced Elastomer Systems, Newport | Polymers  |
| 39 | Murco, Pembroke                     | Chemicals |
| 40 | GE Healthcare, Cardiff              | Chemicals |
| 41 | Visqueen, Rhymney                   | Polymers  |
| 42 | Zeon, Barry                         | Chemicals |
| 43 | Cabot, Barry                        | Chemicals |

The feedback was extensive and is summarised in Appendix 3. With few exceptions companies were very supportive of the Gold Standard both in concept, “it provides a valuable framework for training to world class” and content. A number of the small companies whilst recognising the value do not have the position of 1<sup>st</sup> Line Supervisor or the position with this title is set at a lower level (in these cases we suggested the Gold Standard at level 3 – Process Technician).

Medium and large companies were very supportive and provided good feedback on the content. The key changes to arise in this phase were:

### **Technical Competence**

Process technology proved highly contentious. Many companies commented that understanding the theory and principles of chemistry, polymers and biochemistry/ pharmaceutical science is a “nice to have” at best, excellent production staff is what is required. This is a difficult area and some flexibility needs to be built into the Gold Standard – Cogent would like to improve the science knowledge of employees but do not want to exclude vocationally trained individuals who may lack the academic training but are excellent supervisors with hands-on experience.

## **Business Improvement**

A number of companies train their supervisors to 6-Sigma Green Belt status and this will be reflected in the Gold Standard. A number of companies identified specific improvement techniques but this was captured by having a pick and mix set of units in the qualification.

Quality was mentioned on a number of occasions; often the reference was to business improvement techniques aimed at quality improvement which is covered by BIT however others referenced programmes aligned to ISO 9000. One suggestion was a workshop "Introduction to QM Systems" by the Wales Quality Centre.

## **Compliance**

Compliance was discussed with NEBOSH but the supervisor course identified required 80 hours training and was felt by employers to be unsuitable. The preferred course suggested by many companies was IOSH Managing Safely; this was added to the Gold Standard.

Companies suggested that this section should include;

Safety and Environmental and Quality eg COMAH, ISO 9000/1, ISO 14001, Operational Excellence

Safe Work Practice (Core 7 plus local additions)

'an individual can section....'

Identify legislative updates, effects on workforce and communicate these to shift personnel.

Use WHS, PS, EH etc knowledge to effectively manage shift compliance

Mitigate risks to compliance and/or direct team to mitigate risk.

Respond appropriately to breaches in compliance

Sustainability

## **Functional & Behavioural**

It was suggested adding a number of other competencies to the Functional & Behavioural skills

- managing diversity and discrimination
- performance management
- development of coaching skills to improve delegation
- business awareness contextualised for the sector and company
- financial know-how; P&L, cost management
- communication in the workplace
- solving problems and making decisions is a key management unit
- prioritisation skills, i.e. ability to deal with a number of issues at one time, evaluate, consult and be able to make rational logical decisions on work priorities
- standard setting skills, i.e. the ability to operate to set standards of behaviour, and reinforce standards when necessary (e.g. discipline, work throughput) by taking appropriate action.
- positive Counselling skills to cope with the human aspects of the team, allied with a basic understanding of management theory

## **Revision and Sign-off of the Gold Standard**

In light of the employer feedback the project team revised the draft Gold Standard to take account of key points raised during the consultation. Some points were very company specific and would be reflected by contextualisation of the Gold Standard by a company; however other points were more generally applicable.

## **Technical Competence**

The need for a new entrant (i.e. graduate recruit) to understand the company production process was agreed but testing this through a Level 3 VRQ was not seen as appropriate. Companies ensure that new starters understand the site's Standard Operating Procedures and this requires an understanding of the process; some companies test this but not all. It was therefore decided to develop an industry standard which the company could use to ensure that new starters had the required process knowledge.

The level of technical knowledge required was contentious. It was agreed that companies should be striving to develop individuals and that modules of training would be appropriate but not the requirement for a full Honours or Foundation degree. Cogent is currently managing a HEFCE funded project to put in place a framework for Science and Engineering Foundation degrees; this will be based on modules in a continuing professional development programme. The academic modules from this project covering Principal and Specialist knowledge would be ideal. This is very much in the spirit of an 'aspirational' Gold Standard.

The key skill development for this job role is managing the process and people and suitable training is available through the management National Occupational Standards. As many companies told us they use ILM for management training we structured training around ILM qualifications, again 'bite sized' modules that can be delivered flexibly.

## **Business Improvement**

The pick and mix Business Improvement module met the needs of the companies for lean manufacturing training and Green belt was deemed as appropriate as a 6-Sigma attainment level. As part of a separate project, 6-Sigma training is being mapped for the BIT NVQ and this will be fed into the Gold Standard when available.

## **Compliance**

This was debated at great length and it was agreed that IOSH Managing Safely was the appropriate training. This 4 day course is used by many companies for training their supervisors and is the industry standard.

The IOSH Managing Safely includes modules on:

|                     |                                     |
|---------------------|-------------------------------------|
| Legislation         | Investigating accidents & incidents |
| Assessing risks     | Measuring performance               |
| Controlling risks   | Protecting our environment          |
| Identifying hazards | Understanding your responsibilities |

which cover most of the training needs identified.

The level of environmental training will be reviewed and discussed with IOSH if seen to be insufficient. There is a qualification in Level 2/3 Gold Standards – Award in the Management and Control of Environmental Hazards, which may also be appropriate.

Cogent is currently looking at Sustainability skills with a view of developing appropriate training standards; when these are available they will be incorporated in the Gold Standards.

### **Functional & Behavioural**

Coupled with the more general management skills that need development such as responsibility, people management, problems solving and decision making two key skills that are often missing emerged during the consultation. Firstly a major challenge for newly promoted supervisors was delegating tasks rather than doing them themselves, too often they continued with old behaviours. Secondly communication was often a problem area, getting the point across is important and also presenting a convincing argument to more senior managers.

Companies in many instances also want managers to take responsibility for performance management and people development. These programmes are generally company specific but there are some general principles that can be applied. Understanding the issues around diversity and discrimination was also important

Interestingly there was a desire for more senior technical staff to have an appreciation of the business and many companies valued this. Typically this included an understanding of the company values, competitive environment, present and future challenges faced by the industry/company, financials including cost/budget management and customers.

Taking all these points into consideration the Gold Standard was re-drafted and signed-off by the project team (Appendix 4).

### **Provider Consultation**

A number of providers were selected for consultation covering private and public provision, to gather their view of the Gold Standard and their ability to deliver the required training.

|   | <b>Provider</b>                | <b>Delivery</b>              |
|---|--------------------------------|------------------------------|
| 1 | Focus HR Consulting & Training | HRD advisor                  |
| 2 | Awbery Consultants             | Management & Leadership      |
| 3 | Barry Training Services        | Compliance                   |
| 4 | Freshbaked                     | Business Improvement, M&L    |
| 5 | University of Deeside          | Polymer Composites           |
| 6 | University of Bangor           | Bio materials (not relevant) |
| 7 | University of Swansea          | Polymers                     |
| 8 | Pembroke College               | Chemicals                    |

The private providers were supportive of the Gold Standard and could and would deliver parts of it. The training identified matched their employer designed training courses in many aspects which was positive feedback that the consultation had truly identified the skills needs. Awbery suggested adding communication to the F&B skills – it was missing at that time although noted.

## **Gold Standard Delivery**

Awarding bodies such as ILM have accredited centres and these were mapped for Wales; as can be seen in Appendix 5 there is a good network of provision for delivering the Gold Standard ILM qualifications.

Approved IOSH centres for delivering Managing Safely are also widespread across Wales, Appendix 6.

Many public providers in Wales are delivering the NVQ in Business Improvement at levels 2 and 3, Appendix 7; in addition there are many private providers delivering 'lean manufacturing' and 6-Sigma courses. By scoping the business improvement requirement, the aim is to focus all provision based on employer demand and at the end give the learner a qualification (Certificate in Process Improvement L2 & L3).

The technical competence section of the Gold Standard differentiates Chemicals and Polymers; the other skills are transferable although contextualised for the sector. The delivery of the technical training is sparser due to the lack of Foundation degrees in the sector. The University of Glamorgan is currently (April 09) working with Pembroke College to produce a Foundation Degree for Petrochemicals; this will be based on the concept of modules, *vide supra*. The University of Swansea offers higher level polymer science courses but these are not suitable for this Gold Standard; similarly the University of Deeside offers composite courses. An action from this project is to extend the provision of modular Foundation degrees in science in Wales as part of the HEFCE project mentioned previously.

There are also few vocational training centres in Wales delivering chemical and polymer NVQs for the process operators and technicians at levels 2 and 3 in Wales, Appendix 8.

## **Promotion of the Gold Standard**

A Gold Standard template has been designed for the range of Gold Standards and the final 1<sup>st</sup> Line Supervisor Gold Standards for polymers and chemicals are shown in Appendix 9. This version has been made available on-line and can be accessed via the Cogent web-site [www.cogent-ssc.com](http://www.cogent-ssc.com).

A Gold Standard information leaflet was produced outside of this project Appendix 10 and explains the concept, benefits and gives an example Gold Standard. Both the fact sheet and 1<sup>st</sup> Line Supervisor Gold Standards will be translated into Welsh as part of this project. An information backdrop/pull-up will be produced for use in Wales.

The Marketing Plan is detailed in Appendix 11 and will follow the completion of the project. Following translation of the Gold Standard documents they will be circulated in hard copy to all those companies consulted previously i.e. ~150 large, medium and small companies. An information letter will be produced for providers explaining the project and the Gold Standard and inviting them to contact Cogent if they wished to be accredited to deliver all or parts of the Gold Standard. This will be circulated with the Gold Standard documentation.

The documentation will also be circulated to trade unions, trade bodies and institutes, business organisations in the sector and WAG officials regional and central.

The 1<sup>st</sup> Line Supervisor is being incorporated into the Cogent career pathway [www.cogent-careers.com](http://www.cogent-careers.com) providing on-line careers information.

The suite of Gold Standards is to be launched at the National Skills Academy for Process Industries Conference in York on April 30, 2009 and this will be coupled with other media promotions.

### **What Next**

The 1<sup>st</sup> Line Supervisor Gold Standards in chemicals and polymers form part of an ever increasing suite of Gold Standards that will form a national CPD framework for the science based industries. This project has also informed the Pharmaceutical 1<sup>st</sup> Line Supervisor.

The next stage is to ensure that the Gold Standard has the impact desired and makes a real difference to training in the Cogent sector. Clearly promotion is an important aspect of this but two other challenges need to be addressed.

Funding – in England funding for the Gold Standard modules is through Train to Gain; discussions will be opened with HRD advisors (Alan Williams is an advisor to a number of companies consulted) on funding opportunities for the Gold Standard and where there are gaps these discussions will be followed up with the Welsh Assembly Government.

Provision – the National Skills Academy for Process Industries is a subsidiary of Cogent and works closely with Cogent to ensure that quality assured provision is available to deliver the Gold Standard. The role of the Skills Academy in Wales is ill-defined and clarity will be sought with WAG.

### **End of Project Reviews**

### **Project Plan**

The original project plan foresaw project completion end March 2009 and, despite starting later than anticipated this was achieved. The milestones were adjusted during the project due to; late start of the project; economic downturn causing many companies to close Dec – Jan and bad weather in January restricting travel. A summary of the project plan and actual delivery is shown below.

| Task   | Output + Comments  | Supporting Evidence (to be submitted to WAG)  | Date  | Completed |
|--|--|---|---|-----------|
| Project Initiation and first steering group meeting  | Steering Group established<br>Terms of Reference agreed<br>Project Plan agreed<br>Meeting plan agreed  | 1. Constitution of members of Steering Group<br>2. TOR and Remit<br>3. Copy of Plan<br>4. Meeting minutes                                     | By 27-07-08   | 16-07-08  |

\* ongoing

# grouped under other  
consultation

The total project cost was £39,333 of which the Welsh Assembly Government contributed £24,550. Translation of the report, the Gold Standards and the leaflet into Welsh is in progress and will be charged against invoice as agreed with a budget of £2000

## Risk Register

The risk register was updated throughout the project.

| Description of Risk                       | Likelihood<br>1 – 5<br><br>(1= unlikely<br>5= almost certain) | Severity of Impact 1 - 5<br><br>(1=low<br>5= critical) | Total | Action  | Review Date |
|---|---|--|-------|---|-------------|
| Employers do not respond to questionnaire | 3   | 5  | 7     | Arrange face to face meetings, use senior management contacts to facilitate<br>Agreed to ensure face-to-face meetings   | Jan 14      |
| Emails ineffective for getting feedback   | 4   | 3  | 7     | Telephone and repeat emails. Need to broaden coverage outside Wales due to only limited (100) email contacts in Wales.<br>Post GS with prepaid reply to 150 companies | Feb 19      |
| Employers do not use the Gold Standards   | 2   | 4  | 6     | Marketing campaign to publicise good practice and enhance peer pressure   | Jan 14      |
| Employers do not value Gold Standards     | 1   | 3  | 4     | Revisit the Framework to ensure that it has credibility with all employers  | Jan 14      |
| Unavailability of consultant              | 1   | 3  | 4     | Many consultants available  | Jan 14      |
| Low take up of Gold Standard              | 4   | 4  | 8     | Marketing campaign; Economic Climate severely affecting companies Ensure funding, talk to WAG; promote through the National Skills Academy Process Industries         | Feb 19      |
| Slippage in developing the Gold Standard  | 3   | 1  | 4     | Gold Standard consultation extended to end08; project completion date unchanged   | Jan 14      |
| Long term shutdowns delaying consultation | 3   | 2  | 5     | Extend sign-off period for GS to ensure multi-feedback  | Jan 14      |

## **Quality Plan**

Throughout the Gold Standard project, Cogent ensured that quality principles were followed in a number of ways:

### **Internal review**

Internal reviews were conducted throughout the project by the project team.

### **External review**

External reviews with stakeholders were conducted to ensure that the programme meets expectations.

## **Word of Thanks**

Cogent would like to thank the Welsh Assembly Government for their financial support for this project; without this support Cogent would have been unable to develop Gold Standards that truly reflect employer demand.

John Holton

March 2009

| <b>Atlas Polymers</b>  | Very difficult to make contact with this company; they expressed no interest due to their size and current conditions   |   |  |
| <b>Dragon Plastics</b>   | This company together with Riverside Plastics have merged to become Gwalia Packaging and are interested and keen for further consultation and possible use of the Standard, No adverse comments on the content, but would see if changes are needed after implementing.   |   |  |
| <b>Dragon Polystyrene</b>  | This company is very small and has no interest due to its size  |   |  |
| <b>Kautex Textron</b>  | This is a well established Tier One Automotive supplier with global plants and the South Wales factory has seen many changes over the years. At present on short time working due to the decline in UK manufacturing, however they are interested in the Gold Standard, only reservation was does it effect or change anything in their Automotive standards and ratings, QS 16949 Management Systems. Should they see an improvement in output then they would use it, but at present they are not |   |  |

|  |   |
|--|---|
|  | sure if they will survive in the current situation and some work streams may go to the German plant in Bonn.  |
| <b>Kay Premium Marking Films</b>   | Very good feed back from this company and very keen to follow through with the Gold Standard. It was felt that we had put too much emphasis on chemistry in the Technical Competence part   |
| <b>Klockner Pentaplast</b>   | Not interested. In hindsight perhaps needs to be contacted from MD level.   |
| <b>Linear Plastics<br/>Mollertech<br/>MVTP Packaging<br/>Principality Plastics</b> | Very small companies; not interested.   |
| <b>Synergy Plastics</b>  | Medium sized company and interested to follow through. At first opinion thought that it was a bit over the top for their supervisors but could understand the reason behind the need for qualifications in an area that has not used formal quals before. |
| <b>Advanced Elastomer Systems.</b>   | Based on the Solutia site but fully independent, this company is run from off site offices in Leicester and showed interest in the Gold Standard but will not implement any changes at present in the manufacturing plant.                                |
| <b>Visqueen</b>  | seeking increased standards like this   |
| <b>GE Health Care</b>  | Specialised facilities/ QA processes  |

## Appendix 4 Final Gold Standards

## Chemicals

| <b>Technical Competence</b> | <b>The Gold Standard</b><br><i>Job Role skills, knowledge and behaviours</i>  | <b>Gold Standard Qualifications</b><br><i>Awards, Certificates &amp; Diplomas</i>  |
|-----------------------------|---|--|
| Process Operations          | the individual can... <ul style="list-style-type: none"> <li>develop and monitor plans and procedures</li> <li>allocate personnel to maintain processing</li> <li>solve operational problems</li> <li>respond to process problems</li> </ul>  | <p><b>L3 ILM Award in Managing Operations</b><br/>Solving problems &amp; making decisions<br/>Planning to work efficiently<br/>Organising &amp; delegating<br/>Managing projects<br/>Managing the effective use of equipment</p> <p><b>BSc (Honours) in Science, Engineering or Technology</b><br/>OR<br/><b>Foundation Degree modules in:</b><br/>Underpinning STEM module and Specialist STEM module in Science or Engineering or Technology</p> <p><b>Cogent Industry Training Standard for Chemicals</b><br/>(to be developed)</p> |

## Appendix 10 Gold Standard Leaflet

ZOOM

 Skills for Science Based Industries

# The Cogent Gold Standard

**Vision:** increasing industry profitability and competitiveness through world-class skills.

The Gold Standard is a national framework for continuous professional development setting out the skills required for world class performance in key job roles in the process industries.

It describes and maps the competencies required to do each job across four areas of competence:

- Technical Competence
- Business Improvement
- Compliance
- Functional and Behavioural

Steve Westhead  
Managing Director of  
Solutia UK Ltd in Newport.

### Cogent Gold Standard

*Solutia is part of a global chemicals company which creates performance materials that are used primarily in the automotive and architectural, transportation and industrial markets.*

*"The Cogent Gold Standard is absolutely essential if this vital and value-adding sector is to realise its ambitions in an aggressive global market. Without such a standard, there is a danger our industry will lag in productivity terms. It is fundamental to the highest standards of Safety, Health and Environment which is essential to public confidence and employee well-being and motivation."*

### What does the Cogent Gold Standard offer employers?

- An industry skills benchmark for world-class performance
- Assurance that a company's investment in skills hits all the right targets
- The accreditation of existing skills and identification of gaps
- Transferability of skills across the Process Industries
- Signposting to fundable training programmes
- Quality assured, bite-sized training programmes delivered flexibly to meet the needs of individuals and businesses

### What does the Cogent Gold Standard offer employees?

- The ability to transfer their skills across the Sector
- Accreditation of their skills to world-class standards
- Clear role progress and career pathways
- An aspirational framework for individuals to fulfil their potential
- Support for Trades Unions Representatives in promoting training

# How can the Gold Standard be achieved?

Achievement of the Gold Standard can be made through existing full qualifications or smaller bite-sized qualifications targeted at particular skills areas. These new qualifications match the way training is delivered in the Sector and provide a more flexible way to build up a portfolio of accredited skills. See the example below:

| Process Technician (Chemicals)    | The Gold Standard<br>Job Role skills, knowledge and behaviours   | Gold Standard Qualifications<br>Awards, Certificates & Diplomas   |
|-----------------------------------|--|---|

Cogent SSC, Unit 5, Mandarin Court, Centre Park  
Warrington WA1 1GG

The strategic skills alliance for the Process Industries

## **Appendix 11 Marketing Plan**

### **Purpose:**

The marketing and communications activity proposed will raise awareness of the “world class standards “concept behind the Cogent Gold Standard and understanding of the relevance to profitability and competitiveness by employers, individuals and key influencers on the process industries in Wales. It will also focus on the national training framework concept which is judged a major benefit by employers.

### **Objectives:**

1. To communicate directly with all identified process industry companies in Wales, (see messages and channels).
2. To communicate key messages about the Gold Standard through key influencers in Wales, including trade bodies, training providers, Government and local authority channels, professional bodies and trades unions and the media.
3. To target relevant Welsh and cross-border media with bespoke stories about the benefits of the Gold Standard and how industry is aspiring to higher quality and effectiveness in difficult economic times.

### **Outcomes:**

1. To engage the Welsh process industry employers in the Gold Standard
2. To achieve coverage of the Gold Standard in the regional/city business and industry sections of the South Wales, South West Wales and North Wales media, and in relevant cross-border media.
3. To activate training providers in Wales to deliver the Gold Standard.

### **Publicity material**

1. Revised Gold Standard Product Sheets: English/Welsh.
2. Gold Standard 1<sup>st</sup> Line Supervisor for Chemicals and Polymers: English/Welsh
3. Gold Standard backdrop/pull up for events

### **Distribution**

1. DM/letter to all identified process companies: English/Welsh
2. DM letter to all identified training providers
3. DM/letter to all relevant Trade and professional bodies.
4. DM/letter to trades unions ULRS.
5. DM/letter to business support organisations
6. DM/letter to relevant AMs and local, regional and WAG officials.

### **E-comms:**

1. New Gold Standard templates on Cogent website.
2. 1<sup>st</sup> Line Supervisor roles linked from Career Pathway site.
3. Power point or short video loop for memory stick/dvd.

### **Media**

1. Press notices and tele-briefings to business and industry correspondents in Pembrokeshire, Swansea, Port Talbot to –Newport arc; Valleys, mid-Wales, North East Wales and bordering English media in Cheshire, Deeside and Liverpool.
2. Interview/s with Cogent Gold Standard Ambassador on radio/TV as possible.

## **Appendix 12 Terms of Reference**

### **Terms of Reference**

- Implement the Project Vision, Aims and Objectives.
- Act as a point of reference on project implementation and roll out.
- Serve as a forum to review project costs, programme and risk register in line with the constraints of Project Plan. Also to aid in the discharge of mitigating project risks.
- Sign-off any consultant appointments to the project.
- Oversee the development of all required materials & tools to ensure a cost-effective implementation
