

FORMULATION: THE BASICS

Formulation is an essential step in the development and manufacture of a huge number of chemical-using products. Medicines, cosmetics, toiletries, foods, detergents, cleaners, paints, inks, agrochemicals and adhesives are all **formulated products**.

FORMULATION: THE BASICS is a one day introduction to formulation - what it is, where, how and why it is done, and what are its benefits.

FORMULATION: THE BASICS is especially suited to:

Commercial, production, technical or administrative staff in any company involved in the formulation supply chain.

Newcomers to R&D and production functions such as technicians, process operatives, QC and administrative staff.

Students and academics from non-chemistry disciplines who are seeking an industrial context to formulation.

Some basic scientific understanding will be helpful but is not essential. A chemistry degree is not required!

FORMULATION: THE BASICS

ONE DAY COURSE
ALDERLEY PARK, UK
14TH JUNE 2018

FURTHER DETAILS

COURSE FEES:

£325 + VAT per person for registrations by 13 April

£375 + VAT per person for registrations after 13 April
