

## DESIGN OF EXPERIMENTS FOR FORMULATORS

**Formulations** are complex products with multiple components and phases. To deliver the optimum product we usually need to balance several performance properties. No wonder that the traditional "one variable at a time" approach to product optimisation often fails.

**DESIGN OF EXPERIMENTS FOR FORMULATORS** is a two-day course which will improve your practical understanding of statistical experimental design (DoE) and how it can be applied to improve and develop your formulations.

**DESIGN OF EXPERIMENTS FOR FORMULATORS** is very suitable for:

Those involved in all aspects of formulation, from researchers, through to product developers, scale-up engineers and process engineers in manufacturing.

Those active in all formulating industries areas including inks, coatings, agrochemicals, pharmaceuticals, food, drink, cosmetics, FMCG, home care and health care.

DoE software will be used in the course, but the principles can be applied to all traditional software packages as well as Excel.

No serious prior statistical knowledge will be needed.

### DESIGN OF EXPERIMENTS FOR FORMULATORS

**TWO DAY COURSE  
EAST MIDLANDS, UK  
3RD-4TH DECEMBER 2019**

### FURTHER DETAILS

#### **COURSE FEES:**

**£995 + VAT** per person for registrations by 30 Sept.

**£1149 + VAT** per person for registrations after 30 Sept.
